

# MANAGING SECURITY RISK ACROSS YOUR ENTERPRISE

Managing risk at the enterprise level involves close collaboration of the physical and information security functions, responsibilities and missions. This encompasses enhanced communications and information sharing between the information technology, operational technology and physical security groups. The combined joint security operations center (JSOC) can be the most effective way to manage security risks across the enterprise. 

The following article, *Multi-Vector Threats and the Argument for Greater Convergence*, written in conjunction with our strategic partners at Revolutionary Security, was recently published in *Cyber Security – A Peer Reviewed Journal*. It addresses how an organization's security operations center can converge their physical and information security functions to effectively manage multi-vector threats and protect themselves from the evolving threat landscape.
