OVERVIEW

Lindsay Woolward is a security and audiovisual consultant specializing in security risk consulting, security technology design, and audiovisual systems design.

Mr. Woolward has advised a wide variety of clients from Seattle to Fort Lauderdale including city, county, and state governments, K-12 school districts, universities, corporations, and transportation authorities. Projects include comprehensive security risk assessment and master planning, threat vulnerability assessment, security technology systems design, and AV systems design.

Mr. Woolward brings a big-picture understanding of how risk environment, security posture, and systems design come together to create a whole security picture. He unifies that broad understanding with a focus on each client site's unique characteristics, taking care to understand and account for the details impacting his client's security picture before creating a strategy to mitigate risk.

Before joining Guidepost, Mr. Woolward founded Quill Security Technology to build first-in-the-world security risk models and data dashboards for universities, national manufacturers, and multinational corporations, providing both a wealth of security data and a straight-forward way to manage physical security programs based on consistent ROI analysis.
