

SECURITY CONSULTING

PHYSICAL SECURITY

We specialize in evaluating and implementing all aspects of physical security to create a well-rounded and effective security program. Our experts are skilled in crime prevention through physical design (CPTPD) and work in compliance with ASIS International standards outlined in the Protection of Assets Manual. We provide the guidance and experience needed to plan, design and manage every aspect of physical security programs.

OUR CORE SECURITY DEVELOPMENT SERVICES INCLUDE:

- Anti-Terrorism + Force Protection Planning
- CPTED Analysis and Design Strategies
- Penetration Testing
- Physical Standards Development
- Program Gap Analysis
- Protective Strategy Design
- Regulatory Compliance Audits
- Security Systems Master Planning
- Systems Design and Engineering
- Threat, Risk + Vulnerability Assessments

Certain assets and facilities need impenetrable protection. Our team evaluates, designs, and implements measures to adequately protect critical assets. We offer a thorough analysis of current systems and design so we can provide the insight and recommendations necessary to be proactive and protected in the face of virtually any event or targeted attack.

POLICY + PROCEDURE DEVELOPMENT

Our comprehensive, third-party analysis helps identify weak points in operations and an understanding of processes and procedures may be contributing to existing vulnerabilities. With our expert guidance, we'll help update or fine-tune the processes and procedures to meet the desired security posture and strengthen or eliminate deficiencies.

STANDARDS DEVELOPMENT

Our standards development program is an added layer of analysis and policy development that provides an understanding of how current systems and procedures work together. Our experts help develop security standards to create a comprehensive model for facilities to use or refine for greater uniformity and predictability in the

organization's approach to security.
